GPS Mini Tracker with Cell Phone Assist Asset Tracker

Mini GPS Tracker and Asset Tracker with CDMA Triangulation unit.

ITEM# SV-CT100 Call Toll Free 1-866-779-8455 [Click here for more pictures](#)

The GPS Mini Tracker with Cell Phone Assist uses the most advanced location techniques available to determine the location of an asset, vehicle or person. The CDMA cell phone assist feature enables you to obtain a location inside buildings and parking garages and other difficult locations for other GPS systems. There is no external antenna required and the device does not need to see the sky like GPS tracking devices. This tracker works inside the trunk of a vehicle, underneath a vehicle, in armored cars, indoors, outdoors and other locations where other GPS devices would be unable to send data. Using cell phone technology makes this an excellent asset tracker as well as a child or elderly GPS locator. Just login to the website 24 hours a day and get the device location right now. The GPS control panel online allows you to program the website to automatically locate the GPS device, from every 2 minutes up to 1 time a day! You can easily find the previous locations and exact real time locations on the map.

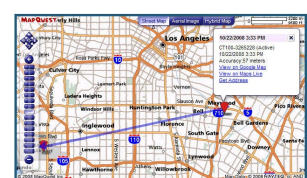

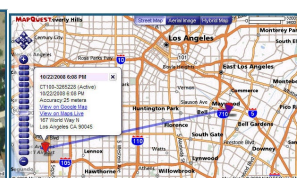

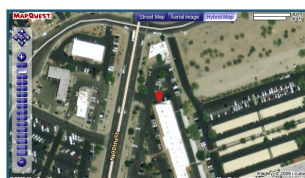

The three red and blue locators show the position of the device inside at the car and driving away, all in the course of a few minutes. This is an actual screen shot from the software. If you were logged in you could click on each marker and see the address for the location.

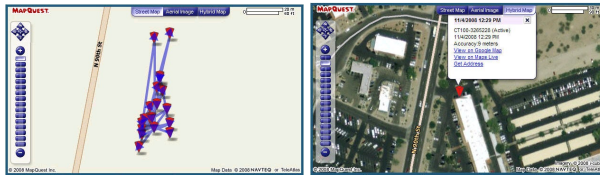

When you logon to the website and request a location on the GPS device. It attempts to triangulate its position from up to 24 GPS satellites. If it is unable to obtain a location from satellite signals, it instantly changes over to cell tower triangulation. It will then automatically determine its position by triangulation with area cell towers. After the device has positioned itself it send the data back to the GPS control panel on the website. The entire process takes only seconds. This process is included in the monthly fee there is now extra charge for GPS or Cell Tower location. Now you can see where your freight is or check on the location of your children. This GPS is designed as a locator for anything. Its small size makes it useable for many different applications such as High value shipments, moving vans, high risk loans on vehicles.

After you login to the secure website you will have access to high resolution maps from Google™ and Maps Live™. With the modern choices of satellite, standard, hybrid and birds eye view map views, in many cases you can see the building at the location of the GPS.

Depending on the monthly plan you choose you can locate (PING) the tracker a certain number of times. Each time you locate the vehicle its 1 PING. In the control panel you have the option of setting the device to PING automatically every minute every few minutes every 1/2 hour every hour and so on. You can change the frequency any time and you can choose to just manually locate the device any time.
