About IntelliGender

For the mom-to-be and baby...

Welcome to IntelliGender! We have revolutionized baby gender discovery with the world's first in-home, urine based Gender Prediction Test™. IntelliGender was founded in 2006 and has over 500,000 *satisfied customers* worldwide. At the core of our success is our goal of providing high quality, fun, affordable pre-birth experiences for the expectant mother and healthy essentials for mom and baby.

A History of Progress

Two working moms with seven children between them contemplated; "there must be a better way". Fascinated about learning the gender of their developing babies as early as possible, they felt there had to be a way of bridging the curiosity gap between conception and Ultrasound. Early in 2005 they began identifying a group of medical and business professionals to help make this idea a reality. They assembled a world class organization ultimately forming IntelliGender® to research the development of an inexpensive, in-home gender prediction test. With an entrepreneurial spirit, they obtained the necessary capital and engaged scientists, chemists and engineers to help realize their dream. In November 2006, they launched the IntelliGender® Gender Prediction Test™ the world's first, in-home, urine based test for gender prediction in the market. IntelliGender quickly grew and is now available in retail outlets throughout the United States and in numerous countries around the world. ([Click Here for List of Countries](#)).

"We are thrilled to be able to offer parents-to-be a fun, affordable pre-birth experience to share the joy of discovery with their family and friends."

Co-Founders, Teresa Garland and Rebecca Griffin

Research and Development

From inception there has been a firm belief in solid science, strong investments in research and continual product and process improvement. Early after initial research began, the company founders sought out the foremost experts in the field. Shortly after the initial product was launched, a Rice University PhD chemist, who (as a graduate student) was part of a 1996 Nobel Prize winning research team in chemistry, was added to the IntelliGender research team, making significant contributions to continued product enhancements. Recently the company added a renowned microbiologist to the team tasked with bringing even more product innovations to the market. ([Click Here to view our independent studies](#))

Manufacturing Excellence

The gender prediction test is not required to be and, therefore, is not FDA approved. It is, however, manufactured in an FDA certified facility. Our machine, used to manufacture the Gender Prediction Test, was custom designed and produced by German engineers for our specific production requirements.

Outstanding Customer Service from Dedicated Moms:

IntelliGender is run by a group of Dallas based moms who are singularly focused on providing outstanding customer service to expectant mothers around the world. Each of them have experienced the amazing realms of motherhood, the challenges that it can sometimes bring, and the complete joy it most certainly provides. With sixteen children between the six of them, they couldn't be more thrilled to share the intimate and rewarding journey through the eyes of becoming a mother with other women.

Founded by moms, for moms...everywhere.
